

# What is digital violence?

The term digital violence refers to various forms of harassment, degradation, discrimination or social isolation on the internet or by electronic means of communication. The locations of digital violence are diverse: social networks, messenger apps, chat rooms, gaming platforms or the email inbox are just some of them.

# How different digital violence looks

Whether threats by email, unauthorised publication of personal data or the spread of fake news: digital violence can look very different.

- Image-based violence
- Cyberbullying: bullying, insulting, exposing, belittling, harassment, threats on the internet
- Deepfakes: from the English deep learning and fake, are video or audio files that are manipulated using artificial intelligence.

# How different digital violence looks

- Doxing offence: If your private data is collected and published without being asked, this is data misuse and is called doxing.
- Disinformation: Especially in times of crisis, the platforms are deliberately fed with “fake news”.
- Face Swap Apps: Face swap apps allow users to falsify audio and video files with their smartphone. Artificial intelligence makes it possible to put faces in other people’s photos or videos using programs or apps.
- Hate speech
- Phishing
- Romance scam
- Shitstorm: Watch out, it’s raining hate
